ACADEMIC COOPERATIVE PROJECT

» INTRODUCTION

Vietnam Financial Database (VNFDB) is an academic cooperative project in order to centralize in a single point of access to different sources and types of data and documentation useful for research in Finance. The information mainly Vietnam and Asian regions. Comparative data from other countries and regions are also available.

» EMPIRICAL RESEARCH

Empirical research concerning financial markets is currently hindered by several factors, among others the high access costs to financial and stock exchange data and the difficulty to obtain quality data. That is why the VNFDB works to create verified, controlled and homogeneous databases over long periods, the same way CRSP does with American data.

The database covers different areas: economics, commodities, currencies, interest rates, bonds, equities, indexes, mutual funds, ... for vietnamese and international markets.

» BIBLIOGRAPHICAL DATABASE

The second mission consists of building a bibliographical database on the research production in finance in universities and research centers, indexing finance theses and working papers, along with links to the original documents.

» COMPUTING CAPABILITIES

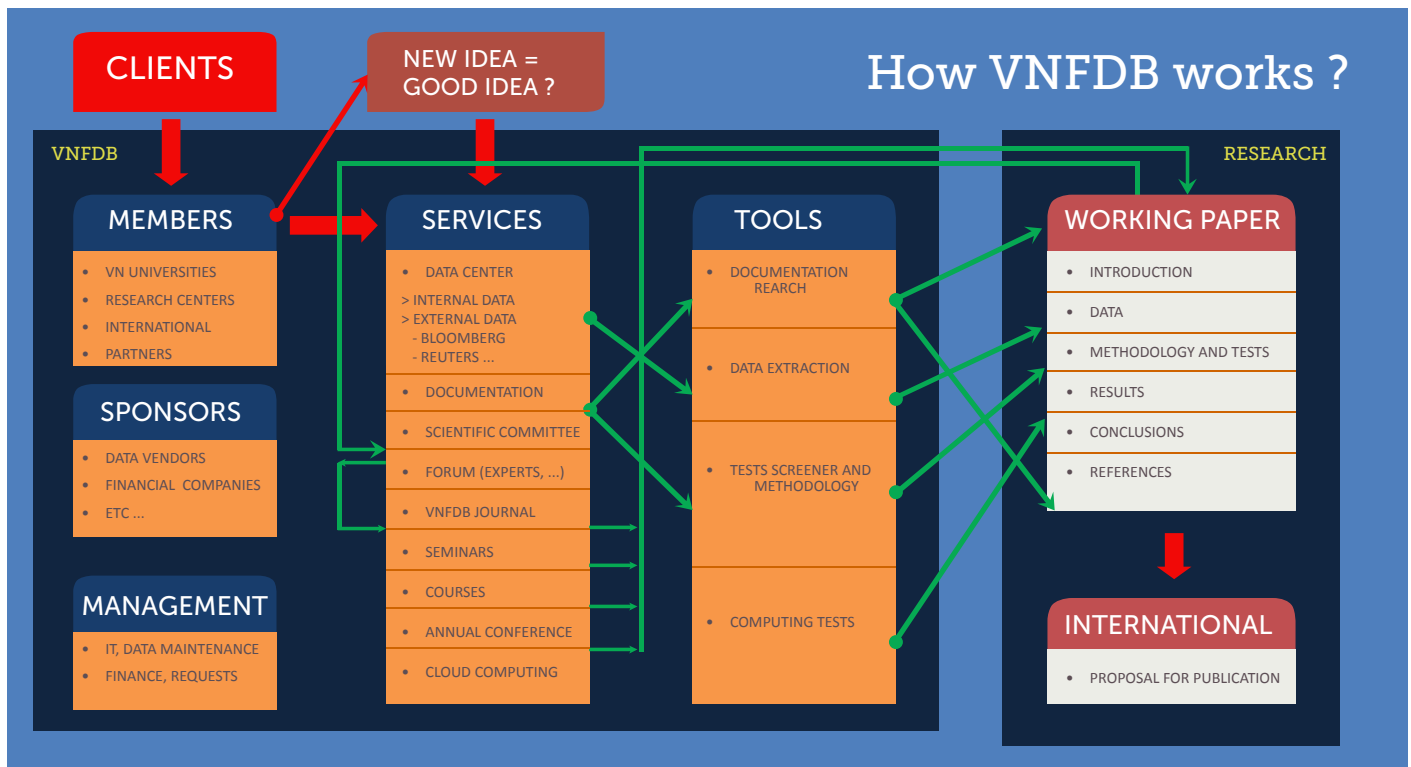

The third mission of this project is to offer high output computing capabilities, available to researchers who are interested in short term access to high performance and volume computing. Thanks to cloud computing technology, the institute can provide researchers with an on-demand computer cluster for the required short period.

Many researchers are reluctant to make empirical research due to their limited computing ability. Such a platform will give them access to other research opportunities and reduce completion time.

Other actions such as creating a **community of researchers in Finance** can be considered. First to market researchers' publications, then create the conditions of sharing (an annual conference, a quarterly online research journal, reading seminars to discuss in detail an article or a research topic) and finally enjoy the experience of former mentors for new ones. This emulation can be beneficial for research in Finance in Vietnam, and its recognition abroad.
