IFRC and the equity indexes:

IFRC (Intelligent Financial Research & Consulting) is a company specializing in designing and calculating equity indexes, an unfamiliar product and not popularly used in Vietnam financial market. Realizing a high potential of the product to this market in the near future, we want to cooperate with your company to share about our business.

- Firstly, the stock index is used to reflect the overall growth of the financial market of a country, a sector or a group of stocks chosen by scientific methods.
- The indices are also used to create financial products with low risk and high investment efficiency: Investment Funds, Options and Futures pricing, on stocks or on indexes...
- The financial products mentioned above is a measure for the development and safety of a financial market.
- The securities index ownership is the fastest and the most widely way to publication to the foreign and domestic financial markets.

Advantages of IFRC

- Highly experienced professional team is trained and supervised by Mr. Mai Huu Minh with 12 years experience working for the Paris Stock Exchange and the New York Stock Exchange in Index Department.
- Developed over 100 stock indexes: Global, Country, Benchmark, BlueChips, Sector The IFRC Global index is the broadest index and covers 1000 international companies.
- Provide full and transparent information on indicators (calculation method and data of companies in the index) to help monitoring and analyzing the situation of investors.
- Ability to create indexes that meet the standards of international investment (UCITS IV)
- Relations with extensive expertise, international financial institutions that use and commercialize indices (NYSE New York Stock Exchange, Lyxor, Société Générale, Calyon, BNP Parisbas, Deutsch Bank...).

IFRC with development objectives of the index services

The number of International Index Providers in the world (FTSE, S&P, MSCI...) remains limited and these providers have asked a very high fee because designing and calculating stock index is a type of financial services in particular that requires a high fixed cost and only for the knowledgeable index experts with extensive experience. Currently in the financial markets, none of the financial institutions provide indicators that meet international standards at competitive costs.

Needs to use the index in the world are increasing and Vietnam market will be inevitably following this trend in the future. IFRC realizes this is a good opportunity to build brand awareness as "Competitive Indexes Provider", based on the experience of the founder and human resources in the country.

IFRC has continued to complete steps in implementing plan targets:

Step 1: Completed 06/2010

- Developed daily calculation index software (Daily Calculation).
- Designed and calculated all of the global indexes (over 100 indexes) by date.
- Published monthly index.

Step 2: Completed 06/2012

- Maintain Daily Calculation Index (Daily Calculation)
- Publish daily index (Daily Publication)
- Create and update the period of brochures and financial market analysis documents based on the index.

Step 3: Expected completion

- Switch the calculation method and publish the calculation index in real time (Real time Calculation)
- Publish widely the index in domestic and foreign markets with an aim of seeking opportunities to commercialize the index.
